Another 1st for JPAT ! Further to the success of our 5 speed 55-50SN valve body we are pleased to introduce a new valve body to suit the Aisin Warner AF40-6 (TF80-SC) six speed front wheel drive transmission fitted to Vauxhall / Opel vehicles.

This AF40-6 or TF80-SC valve body uses finely calibrated pressure solenoids to control the clutch to clutch actuation system that this new generation transmission uses to obtain the desired ratio. Clutch to clutch actuation is a method of precisely releasing one clutch just as the clutch for the next ratio is applied, giving a flawless and efficient shift. This method requires the valve body to be within precise pressure parameters so any internal wear, which has already been seen in this unit, is a risk when re-fitting the original valve block. This internal wear will have a dramatic effect on performance and could be the cause a future warranty.

***PLEASE NOTE ; THIS VALVE BODY IS A BRAND NEW UNIT
FROM THE O.E. MANUFACTURER.***
