

ZF6HP26 EXCHANGE TRANSMISSIONS

NOW AVAILABLE FROM

JPAT JP AUTOMATIC TRANSMISSIONS LTD

JP Automatics are pleased to announce the introduction of a service exchange scheme covering the ZF6HP26 transmission fitted to Jaguar. This scheme allows our customers to purchase transmissions remanufactured to O.E. standard at a fraction of the manufacturers trade price. The exchange unit includes torque converter and is supplied fully tested and ready to fit.

The 6HP26 is part of today's generation of automatic transmissions that have the ECU or "Mechatronic" as an integral part of the assembly. The "Mechatronic" unit holds the transmissions factory set parameters including any updates that have been performed and is therefore is vehicle specific. These parameters will be set prior to delivery of your exchange unit eliminating the need to have an expensive and time consuming reset performed. You can also be safe in the knowledge that you will not be re-fitting a "Mechatronic" that has been subjected to a transmission failure.

This exchange scheme is offered with full technical support and comes with a 12 month unlimited mileage warranty. Call today for further details.
