Burnt Clutches, Hard Shifts

A major change has occurred with the forward sprag assembly. The update was implemented because of two concerns with the previous design.

1. Loss of forward when in OD and 3rd range. Has Manual 2nd and 1st (Sprag fails to lock)
2. Burned 3-4 clutch (Sprag fails to freewheel in 4th gear) either of the concerns could be intermittent and the sprag may appear to operate correctly when it is rotated by hand on the bench.

A design and vendor change has occurred to address the concerns. The updated sprag element can be easily identified by the “double cage” design. GM sells the updated design as complete sprag assemblies. The part numbers are as follows:

RPO	PART NUMBER
M30 and M33	24243750
M32 and M70	24241477

The Sprag rotates freely clockwise as shown.
